GCP Passport Data Quality Improvement &  
Assessment Workshop - 3-5 July 2007, Maccarese

# Computerization of the MCPD

Tom Hazekamp  
Bioversity International

# MCPD

- Flat-file approach
- Simple format
- Facilitate adoption

FAO/IPGRI MULTI-CROP PASSPORT DESCRIPTORS  
December 2001

The list of multi-crop passport descriptors (MCPD) is developed jointly by IPGRI and FAO to provide international standards to facilitate germplasm passport information exchange. These descriptors aim to be compatible with IPGRI crop descriptor lists and with the descriptors used for the FAO World Information and Early Warning System (WIEWS) on plant genetic resources (PGR).

For each multi-crop passport descriptor, a brief explanation of content, coding scheme and *suggested* fieldname (in parentheses) is provided to assist in the computerized exchange of this type of data. It is recognized that networks or groups of users may want to further expand this MCPD List to meet their specific needs. As long as these additions allow for an easy conversion to the format proposed in the multi-crop passport descriptors, basic passport data can be exchanged worldwide in a consistent manner.

*General comments:*

- If a field allows multiple values, these values should be separated by a semicolon (;) without space(s), (i.e. Accession name: Rheinische Vorgebirgsrauben; Emma; Avlon).
- A field for which no value is available should be left empty (i.e. Elevation). If data are exchanged in ASCII format for a field with a missing numeric value, it should be left empty. If data are exchanged in a database format, missing numeric values should be represented by generic NULL values.
- Dates are recorded as YYYYMMDD. If the month and/or day are missing this should be indicated with hyphens. Leading zeros are required (i.e. 197506-, or 1975---).
- Latitude and longitude are recorded in an alphanumeric format. If the minutes or seconds are missing, this should be indicated with hyphens. Leading zeros are required.
- Country names: Three letter ISO codes are used for countries. The ISO 3166-1: Code List and the Country or the Country or area numerical codes added or changed are not available on-line, but can be obtained from IPGRI [ipgri-mcpd@cgiar.org]
- For institutes the codes from FAO should be used. These codes are available from <http://apps3.fao.org/wiews/> for registered WIEWS users. From the Main Menu select 'PGR' and 'Download'. If new Institute Codes are required, they can be generated online by national WIEWS administrators, or by the FAO WIEWS administrator [Stefano.Dinighero@fao.org].
- The preferred language for free text fields is English (i.e. Location of collecting site and Remarks).

MULTI-CROP PASSPORT DESCRIPTORS	
<b>1. Institute code</b>	<b>(INSTCODE)</b>
Code of the Institute where the accession is maintained. The codes consist of the 3-letter ISO 3166 country code of the country where the institute is located plus a number. The current set of Institute Codes is available from the FAO website ( <a href="http://apps3.fao.org/wiews/">http://apps3.fao.org/wiews/</a> ).	
<b>2. Accession number</b>	<b>(ACCENUMB)</b>
This number serves as a unique identifier for accessions within a genebank collection, and is assigned when a sample is entered into the genebank collection.	
<b>3. Collecting number</b>	<b>(COLLNUMB)</b>

## MCPD (use)

- ECPGR
  - Crop networks
  
- EURISCO
  - MCPD + 6

EURISCO DESCRIPTORS	
<b>0. National inventory code</b>	<b>(NICODE)</b>
Code identifying the National Inventory, the code of the country preparing the National Inventory. Exceptions are possible, if agreed with EURISCO such as NGB. Example: NL0	
<b>1. Institute code</b>	<b>(INSTCODE)</b>
FAO Institute Code of the institute where the accession is maintained. Example: NL0037	
<b>2. Accession number</b>	<b>(ACCENUMB)</b>
This number serves as a unique identifier for accessions within a genebank collection, and is assigned when a sample is entered into the genebank collection. Example: CG000254	
<b>3. Collecting number</b>	<b>(COLLNUMB)</b>
Original number assigned by the collector(s) of the sample, normally composed of the name or initials of the collector(s) followed by a number. This number is essential for identifying duplicates held in different collections. Example: FA90-110	
<b>4. Collecting institute code</b>	<b>(COLLCODE)</b>
Code of the Institute collecting the sample. If the holding institute has collected the material, the collecting institute code (COLLCODE) should be the same as the holding institute code (INSTCODE). Example: NL0037	

---

## MCPD (integration)

- ABCD
  - Mapping of MCPD concepts to ABCD 2.06

## MCPD (use)

# Generation Challenge Programme (GCP)

## Domain modeling

**2005** Initial model explicit

## Data Templates

Passport data template  
based on MCPD + >50  
other concepts

## MCPD (use)

# Generation Challenge Programme (GCP)

Section	Description	Notes
0) Meta data provider	Basic information on the data provider	Mandatory
1) General Passport Data	Basic set of common passport descriptors (adaptation of MCPD <sup>[1]</sup> ) and local uses, special plant characteristics and stress of specific interest to GCP.	Some data should always be submitted.
2) Collecting Location data	Data related to the collecting site and soil characteristics.	Some of these data to be submitted for collected germplasm.
3) Additional Passport Data	Any additional descriptors defined by the data provider that could be of particular interest for the GCP. These could include additional soil or climate characteristics etc.	Optional.
4) Institute codes and decoded values	List of institute codes used in passport data sections and their corresponding decoded name and addresses.	Some data should always be submitted.

---

## MCPD (use)

# Generation Challenge Programme (GCP)

2005 Passport Data Template:

- For the most part still flat file format

---

## MCPD (use)

- Fairly wide adoption
- Flat file format easy

### **BUT**

- Potential problems with repeating values
- Many customized schema's incorporating MCPD in use (SINGER, GCP, GPG2)

---

## MCPD (use)

# Generation Challenge Programme (GCP)

### Domain modeling

### Data Templates

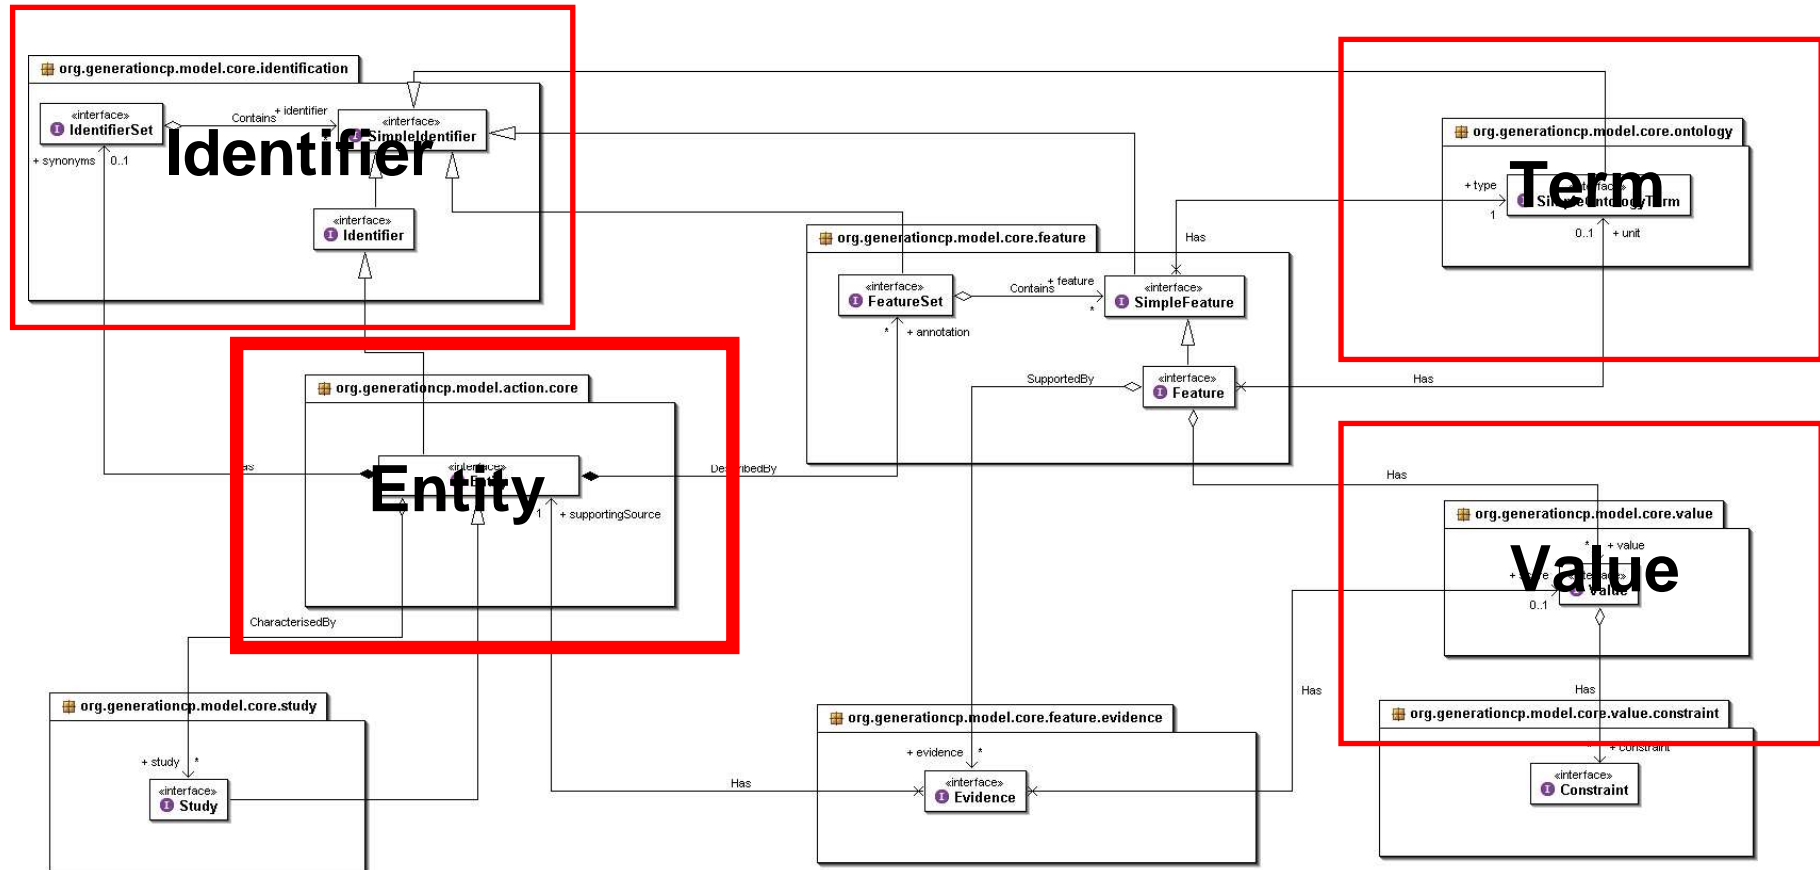

**2005** Initial model explicit  
'Hardcoded'

Passport data template  
based on MCPD + >50  
other concepts

**2007** Parameterized model  
+ ontologies

# MCPD Ontology

The screenshot displays the OBO-Edit software interface for editing the MCPD ontology. The window title is "OBO-Edit version 1.101: Mcpd.obo". The interface is divided into several panels:

- Classes Panel (Left):** A tree view showing the ontology structure. The "collecting number" class is selected and highlighted in purple. Other classes include "multi-crop passport ontology", "biological status of accession", "date descriptor", "germplasm identifier descriptor", "accession name", "accession number", "institute descriptor", "origin descriptor", "ancestral data", "location descriptor", "remarks", "taxonomy descriptor", "type of germplasm storage", and "MultiCropPassportDescriptorCode".
- Search & Filter Panel (Top Right):** Contains a search box, a "Filter" button, and radio buttons for "Search all", "Search children of selection", and "Search ontology of selection".
- Term Information Panel (Middle Right):** Displays details for the selected "collecting number" class:
  - ID: GCP\_020.0000003
  - Secondary IDs: GCP\_010.0000014
  - Namespace: MCPD
  - Name: collecting number
- Definition Panel (Bottom Right):** Shows the class definition and database references (Dbxrefs).
  - Definition:** "Original number assigned by the collector(s) of the sample, normally composed of the name or initials of the collector(s) followed by a number. This item is essential for identifying duplicates held in different collections. It should be unique and always accompany subsamples wherever they are sent."
  - Dbxrefs:** A list containing the URL "http://www.bioversityinternational.org/publications/Pdf/124.pdf".

# MCPD Ontology

The screenshot shows the OBO-Edit software interface for editing the MCPD ontology. The window title is "OBO-Edit version 1.101: Mcpd.obo". The interface is divided into several panels:

- Classes Panel (Left):** A tree view showing the ontology structure. The "collecting number" class is selected and highlighted in purple. Other classes include "multi-crop passport ontology", "multi-crop passport descriptor", "biological status of accession", "date descriptor", "germplasm identifier descriptor", "accession name", "accession number", "institute descriptor", "origin descriptor", "ancestral data", "location descriptor", "remarks", "taxonomy descriptor", "type of germplasm storage", and "MultiCropPassportDescriptorCode".
- Search & Filter Panel (Top Right):** Contains a search box, a "Search" button, and a "Filter" button. It also has radio buttons for "Search all", "Search children of selection", and "Search ontology of selection".
- Term Information Panel (Middle Right):** Displays details for the selected "collecting number" class:
  - ID: GCP\_020.0000003
  - Secondary IDs: GCP\_010.0000014
  - Namespace: MCPD
  - Name: collecting number
- Definition Panel (Bottom Right):** Shows the definition of the class: "Original number assigned by the collector(s) of the sample, normally composed of the name or initials of the collector(s) followed by a number. This item is essential for identifying duplicates held in different collections. It should be unique and always accompany subsamples wherever they are sent." A "Dbxrefs" section contains a reference: <http://www.bioversityinternational.org/publications/Pdf/124.pdf> with an "Edit" button.

# MCPD Ontology

The screenshot shows the OBO-Edit software interface for editing the MCPD ontology. The window title is "OBO-Edit version 1.101: Mcpd.obo". The interface includes a menu bar (File, Edit, Plugins, Help), a search and filter bar, and a class hierarchy tree on the left. The main area displays the details for a class named "collecting number" with the following information:

- ID: GCP\_020.0000003
- Secondary IDs: GCP\_010.0000014
- Namespace: MCPD
- Name: collecting number

Below the details are tabs for "Definition \*", "Comment", and "Cross Products". The "Definition" tab is active, showing the following text:

Original number assigned by the collector(s) of the sample, normally composed of the name or initials of the collector(s) followed by a number. This item is essential for identifying duplicates held in different collections. It should be unique and always accompany subsamples wherever they are sent.

At the bottom of the interface, there are "Add" and "Del" buttons.

# MCPD Ontology

The screenshot displays the OBO-Edit software interface for editing the MCPD ontology. The window title is "OBO-Edit version 1.101: Mcpd.obo". The interface is divided into several panels:

- Classes Panel (Left):** A tree view showing the ontology structure. The "collecting number" class is selected and highlighted in purple. The tree includes "multi-crop passport ontology", "multicrop passport descriptor", and various descriptors like "biological status of accession", "date descriptor", "germplasm identifier descriptor", "institute descriptor", "origin descriptor", "taxonomy descriptor", and "type of germplasm storage".
- Search & Filter Panel (Top Right):** Contains a search box, a "Filter" button, and radio buttons for "Search all", "Search children of selection", and "Search ontology of selection".
- Term Information Panel (Middle Right):** Displays details for the selected "collecting number" class:
  - ID: GCP\_020.0000003
  - Secondary IDs: GCP\_010.0000014
  - Namespace: MCPD
  - Name: collecting number
- Definition Panel (Bottom Right):** Shows the class definition and database references (Dbxrefs).
  - Definition:** "Original number assigned by the collector(s) of the sample, normally composed of the name or initials of the collector(s) followed by a number. This item is essential for identifying duplicates held in different collections. It should be unique and always accompany subsamples wherever they are sent."
  - Dbxrefs:** A list containing the URL "http://www.bioversityinternational.org/publications/Pdf/124.pdf".

---

## MCPD revision

- Single exchange format for all passport data
- Consistent & extendable
- Data items are atomic (1 datum, 1 row)
- Overhead, but no empty cells
- Conversion to format is consistent
- Customized assembly from format is facilitated
- Data quality control facilitated
  
- Development of coherent, controlled vocabularies
- Ontology mapping to other domains

---

## MCPD (adoption)

## Generation Challenge Programme (GCP)

### Domain modeling

### Data Templates

**2005** Initial model explicit

Passport data template  
based on MCPD + >50  
other concepts

**2007** Parameterized model  
+ ontologies

Revision Passport Templ.  
Sept-Oct 2007

---

## Concluding remarks

- MCPD well established
- Requires regular revision to stay up-to-date
- Content
  - New concepts
  - Data quality issues
- Efficiency
  - Flat file format restrictive-> flexibility needed
  - Many customized schema's inc. MCPD ->generic
