

“Perhaps the most important value of GCP thus far, is the opportunities it has provided for people of diverse backgrounds to think collectively about solutions to complex problems, and, in the process, to learn from one another.”

—Excerpt from the External Programme and Management Review (EPMR) report, March 2008

GCP Annual Research Meeting participants, September 2008, Bangkok, Thailand

Joining hands with partners...

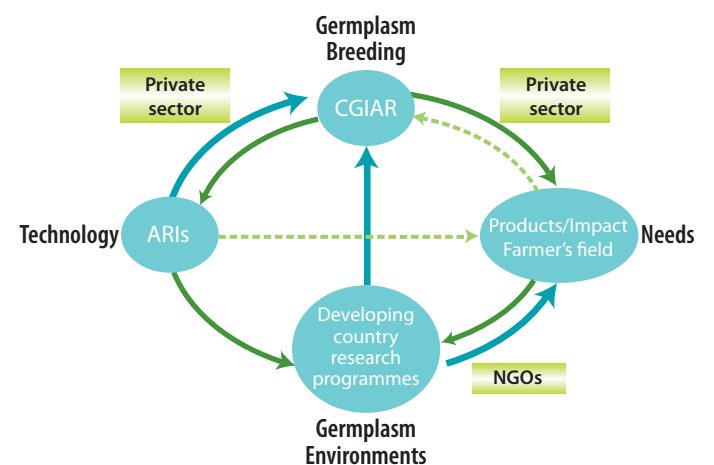

To achieve these objectives, GCP relies on a network that can leverage significant resources – funds, skills, equipment, knowledge

and social capital – through partnerships with many institutions and initiatives in the public and private sector. The GCP Consortium comprises 22 members (nine CGIAR centres, seven developing country institutes and six developed country institutes). In addition to Consortium members, more than 60 advanced research institutes (ARIs) from the North and South and more than 130 developing country institutes are active partners in GCP projects. A broad cross-section of stakeholders is represented – and participates – in GCP's governance.

...and working together

One of our key strengths – through our partners – is bridging the gap between basic and applied science in agriculture, thus providing new tools for plant breeding. Almost all our research projects involve an ARI, a CGIAR Centre and a country research programme, from within or outside the Consortium. Our Stakeholder Committee serves as a neutral platform for inter-stakeholder dialogue, and as a link between us and our various stakeholders such as farmer groups, NGOs, civil society organisations and the private sector.
